Access Group Question

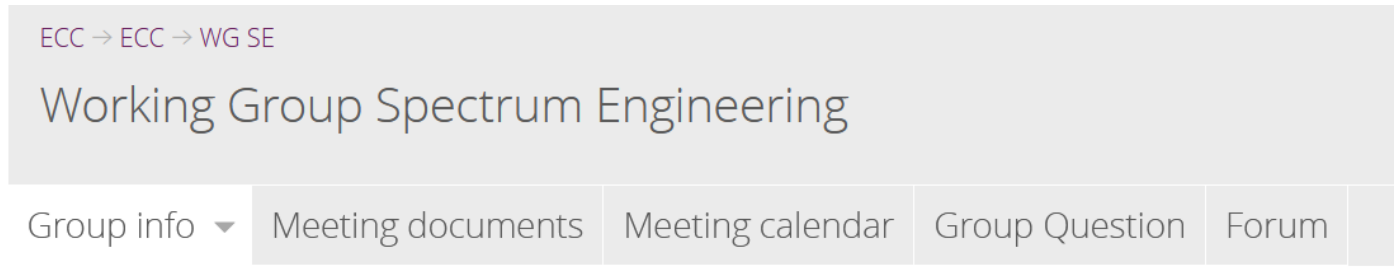

The group question, are accessible for members of a working group / project team. This means that guests in groups cannot see the group questions.

You access the group question in two ways, one is from your profile page - a tab for group questions will show you all the questions from any group you are a member of, both the active questions, and the finished questions.

You can also find group questions for the specific groups in the frontpage of the group, if the function is activated in that group, a tab will show you group questions - but only for that specific group:

If the tab is not there, it simply means that the function is not active in this group. If you think it could be useful, please contact the chair of ECO contact for that group.
